

SMOKE ALARMS SAVE LIVES

Hi....Strataman here,

As the cooler weather approaches a smoke detector check is in order.

59 per cent of deaths from residential fires occur during sleeping hours. A working smoke alarm saves lives.

Smoke alarms are designed to detect fire smoke and emit a loud and distinctive sound to alert occupants of potential danger. Smoke Alarms have been mandatory since 2006 in all buildings where people sleep.

A working smoke alarm increases the time available for a safe escape and saves lives. Testing is simple - simply press the test button and ensure that the alarm beeps.
